## Job Application for Software Engineer

Dear Mr./Ms./Dr. LastName,

## About Me

I'm a software developer who really enjoys write scripts and see how they works. Currently I'm focused on the development of new functionalities and requirements based on the new Android APIs. I have worked with some high traffic android apps and web services. It is really exciting put the hands on different requirements based on specific targets, I had the luck of having developed native apps for startups, 1k, 18.5k and 48.5k daily active users. I do really believe that the most important thing in my career is to develop efficient algorithms based on the needs and the infrastructure of the project.
